

FINAL YEAR PROJECT

TryMyWatch

AUGMENTED REALITY WATCH TRY-ON PLATFORM

INTRODUCTION

TryMyWatch is an Augmented Reality web application that allows users to virtually try on watches in real-time using their camera. It delivers an immersive and interactive experience, helping users visualize how a watch looks on their wrist before making a purchase decision.

USER » AR FIT » CHECKOUT

TECHNOLOGIES

- **Backend:** Laravel (PHP)
- **Database:** MySQL
- **Frontend:** HTML5, CSS3, JavaScript
- **AR/3D:** WebXR, Three.js
- **Others:** REST API, Eloquent ORM, Blade Templating

PROJECT OBJECTIVES

- Provide a realistic AR watch try-on experience in real-time.
- Allow users to explore a wide range of watches virtually.
- Enhance user engagement and purchase confidence.
- Build a scalable and efficient web platform.

METHODOLOGY

- Requirement Analysis
- System Design
- 3D Model Integration
- AR Implementation (WebXR)
- Backend Development (Laravel)
- Testing & Optimization
- Deployment
